

Underground .EDU Backlink Method

Author: Tim Nesbitt

<http://onlineinternetmarketingbusiness.net>

There is no doubt that .edu and .gov backlinks are going to help you rank better with Google!

Most people however have no idea on how to get these backlinks. Which is why I created this report as a way to show you how to get these very valuable and highly regarded backlinks to your sites so that your rankings will increase.

If you follow these **VERY SIMPLE** instructions you should have absolutely no problem getting several of these backlinks to your niche site. I can not stress this enough

DO NOT SPAM! DO NOT SPAM! DO NOT SPAM!

The last thing you are going to want to do with this method is **SPAM** the sites you find! All that you are going to do is end up hurting your rankings rather than helping them if you spam the .edu sites by using this method because they will report you!

Now that we have that out of the way here is the very simple technique on how to get .edu backlinks for your niche site for FREE!

Alright first you are going to want to go and download the **Firefox plugin SEO Quake** at:

<http://www.seoquake.com/guide.php>

- [Update](#)
- [Uninstall](#)
- [Troubleshootings](#)

Introduction:

SeoQuake is a programme, which allows user to view a large number of SE parameters on the fly. SeoQuake for Mozilla Firefox consists of three functional parts: SeoToolbar (requested parameters are shown in a separate toolbar in the browser), Seobar (requested parameters are shown in a separate, fully customizable with CSS, HTML block) and output of requested parameters on Search Engine Result Pages (SERPs). **ATTENTION!** Frequent use of big amount of parameters may lead to the ban from SE. In this case, you will need to delete cookies and change proxy server.

How to install:

- In order to use SeoQuake you have to be using Firefox. You can download it from [here](#).
- After installation of Firefox use it to browse to this very page and choose one of the two buttons below: "Install SeoQuake Now!" - to install it from our server or "Install SeoQuake from Mozilla.org" - to install it from the official Firefox site.

Last updated: 07.March.2011. Version: 2.7.1

- **Software Installation** window should pop-up. Just click **Install Now**. If **Software Installation** window does not appear, then you should allow Firefox to install software from the site you've chose. To do this:
 - Look for the bar at the top of your browser with the button "Edit Options".
 - Click this button.
 - **Allowed Sites - Software installation** window should appear. Choose "Allow".
 - Close this window and choose one of the two installation buttons above one more time.
 - Click **Install Now**.
- Restart Firefox.

Now that you have your SEO Quake installed on your Firefox browser, you are going to want to go to Google and ENTER IN THIS:

site:.edu inurl:blog "post a comment" -"comments closed" -"you must be logged in" "insert your keyword here"

So for me I am going to enter it in like this for my sample site which is on **how to get rid of tooth pain**:

site:.edu inurl:blog "post a comment" -"comments closed" -"you must be logged in" "pain"

Then hit **"Request Parameters"**

Now you can see why you are going to need the SEO Quake plugin:

Now choose a **PR 3, 4, 5, or HIGHER** site.

Now in general if you are in the dieting niche then type **YOUR KEYWORD** which will be something like **"weight loss"** or **"diet"** this way you come across sites that are within your chosen niche and your comments are going to look better too Google as well as whoever may be moderating the site. Often times there is not going to even be a moderator, but you are not going to want a Forex Link in a DIET NICHE!

Also you are going to want to usually use your name such so for mine it would be just **"Tim"** when you enter in your **NAME, URL, and EMAIL**. However if you notice that others are using keywords such as **"Fast Diet Solution"** you can then feel pretty good about using your keyword as your **NAME**.

Now because of the way that you found the site that is the method you used to search for it with Google, you may not be able to post a comment. **The simple solution for this is to COPY and PASTE the URL of the site you found in the Internet Explorer browser and then make your comment!**

After you have made your comment there are going to usually be one of two things that are going to happen.

1. Your comment will be posted with your Keyword or at least Name/Link

or

2. It will tell you that you are going to have to wait for your comment too be approved by a moderator.

If your comment is approved you are then going to want to Copy and then Paste the URL of your comment to Pingomatic and PING IT!

Here is the site I put my comment on:

http://www.chop.edu/blog/globalhealth/entry/day_2_what_haiti_looks

Here are some comments that have already been approved on the site so I feel pretty good that my comment will be approved as well even though I put my name in as “Home Remedies For Tooth Pain”

I can't even begin to imagine the real truth behind this tragedy even despite the descriptions in these posts. Thank you for your selfless work and the help you are providing to the people of Haiti.

I cannot believe how cruel the universe has been to Haiti now with this cholera outbreak. I hope aid will be given in order to help them with their infrastructure.

Hi - I don't know how people survive in these types of conditions, but it sure is a testament to the will to succeed.
Posted by [Healthy Smoothies REcipes](#) on February 13, 2011 at 11:47 PM EST #

Now I am going to have to wait for a moderator to approve my comment, however by the looks of some of the comments that have been approved I have a feeling that mine will be approved even with my keyword "Home Remedies For Tooth Pain" if for some reason it isn't then I would recommend using a different email address and then just use your "NAME ONLY" for when you make your comment!

If you can then you are going to want to try and include your KEYWORD/LINK within your comment! This is yet another reason why you are going to want to find .edu sites within your niche is because it not only looks better too Google but the moderator will not mind as much either.

PLEASE NOTE: Sometimes they will not allow this!

EXAMPLE COMMENT:

Hey this article on fighting cavities was really interesting! I run a site at Home Remdies For Tooth Pain and I will definitely be making a blog post about these tips on how to prevent cavities! Once again thank you so much.

Tim

Now this may not be a perfect example but I think you get the idea. **Make sure you READ THE ARTICLE/BLOG POST so that when you add your comment it is relevent to what the article/blog post is about and you will then look like a real site visitor and not a SPAMMER!**

The Underground .EDU Backlink Method is **VERY VERY SIMPLE** so there is no reason why you can't build 1 or 2 .Edu backlinks a day! All you have to do is **TAKE ACTION** and soon your site will be on the first page of Google!

Enjoy,

Tim Nesbitt
