The Safe Way To Getting Healthy And Staying Healthy

More than any other time in history, people are all vying to have the best, healthiest body possible. The health and fitness industries are making billions of dollars every year on herbal supplements, fitness equipment, gyms, and special diets. If you watch TV or read magazines, there is always some intriguing commercial asking for money to help you get into shape.

While many of these options are good and healthy, others you should stay as far away from as possible. Recently, a professional baseball player died at the age of 23. In his locker, a bottle was discovered containing Ephedrine. The FDA just issued a warning that people need to heed.

Now that you have made a commitment to take care of your body, both internal and external, it is critical to your overall health that you do it the right way. Here are some tips for both health and fitness that will help you lose weight, discover ways to maintain a better healthy lifestyle, and be in the best shape of your life – all the smart way!

Today I'm going to give you 70 of the best tips I have found to getting healthy and staying healthy.

Please note that I am not a doctor. You should always consult your doctor before making any decisions related to your health!

I'm going to split this up into two sections. The first one will be tips on exercise and the second one will be tips on health. Let's get started so you can "get healthy and STAY healthy"!

Get Healthy By Exercising and Stay Healthy By Exercising!

1. Instead of just opening the back door to let the dogs out, put them on a leash and go for a nice walk. They will appreciate the new scenery and you are doing yourself a great justice.
2. Instead of eating a heavy lunch, put together something light and easy and go for a walk. You can sip on a protein drink or snack on fruit while enjoying a nice brisk walk before heading back to the office. You will feel refreshed and more invigorated for your afternoon tasks.
3. Get some exercise by joining a bowling league. You can find a league for just about every level of bowler as well as any day and time of the week. This is a great way to get out and have some fun while also exercising. Yes, bowling does count as exercising.
4. This is a new term coined by researchers from the United States relating to ways in which to get the brain activated with its own biochemical pathways. The goal is to have the brain strengthened and energetic. Positive thinking has long been proven to help with illness and disease so the theory is that an energetic mind is also good for fitness.
5. As a way to improve your fitness in a speedy manner and lose weight, try interval training. This means that you where your workout intensity varies. This is beneficial to your workout and fights workout boredom
6. You might wonder what breathing has to do with fitness and the truth is it has a lot to do with it. When exercising, there is a proper way to breath that

will help you with the appropriate amount of oxygen into the system but will also help you with endurance. For example, marathon runners will tell you that they use a rhythm when running that allows them to runner longer and healthier than normal breathing.

7. Aerobic exercise can actually be beneficial for people with diabetes. This exercise increases the insulin sensitivity and when combined with good eating, can help restore a normal glucose metabolism. Before starting into a workout program, you need to see your doctor first to determine if there are any risks for coronary artery disease and that your blood glucose control is appropriate for exercise. Once cleared, you will feel better and see for you the benefits associated with exercise.

8. Okay, the scenario is that you have made your New Year's resolution and are determined to get into shape. Too embarrassed to head to the gym just yet, you make the decision to purchase some equipment such as a Nordic Trac or treadmill to get in better shape before being seen in public. While that is a common occurrence, it is important to make sure you buy the right equipment and equipment in good working order. Many people will sell equipment at a huge discount in the local paper, making the buy look too good to pass up. However, while most are honest sales, some are selling the equipment because it does not work or something is wrong with it. This could lead to further injury so when buying from a private party, bring someone with you who knows about workout equipment or contact the maker of that particular piece of equipment and ask them what to look for to ensure you are buying a good piece of equipment.

9. When trying to get into shape, it is important to have family and friends in support. This means they need to respect your goals and not offer you wrong foods, or try to pull you away from your exercise program. Explain to them how important this is to you and that you need their encouragement.

10. When you have completed your exercise regimen, instead of eating carbohydrates, grab some fresh fruit or water. The reason is that for a minimum of an hour after exercise, the body is still breaking down fat. You need to allow the body to finish doing its job.

11. Set a goal for yourself, perhaps four to six weeks. By breaking up your time into workable chunks of time instead of looking out an entire year, you will have a much easier time meeting your goals and staying on track as well as encouraged.

12. If you are on scheduled prescription medication, you should know that some drugs could have a negative affect if mixed with exercise. Some can cause the heart to work too hard or you might not sweat as needed, to mention a few. If you are taking medication, before you start any exercise program, consult with your physician to ensure there are no harmful effects.

13. Often when trying to get in shape, it seems like you are working hard and sweating, but getting nowhere. In actuality, things are happening, just not yet seen. Keep track of two things in particular. First, track your measurements. You will probably be surprised within only a few weeks at the progress made. Second, track your routines so you can determine what is working for you and what is not as successful.

14. Do not think that just because you are pregnant means you have to stop exercising, unless you have special needs. Before you exercise during pregnancy, always check with your doctor first. Once you get permission to proceed, you will find that leg extensions, standing curls, and other exercises can be done with ease. If you are not sure what you can and cannot do, ask your doctor for recommendations.

15. Exercising outdoors can be refreshing and fun but it can also cause problems if you do not follow some simple rules. Make sure you are drinking enough water, about 16 ounces every 30 minutes, before, during, and after exercise. Some sports drinks such as PowerAid and GatorAid have special ingredients that help replenish fluids to prevent dehydration.

16. If you are actively involved in a workout regimen but you are getting ready to go on vacation for two weeks or have an extra heavy workload for your job over the next couple of weeks, instead of just stopping your routine completely during that time, just cut back. Even reducing your workout by

50% will give you the break you need but also make it much easier to get back to full speed than if you just stopped altogether.

17. Before any workout, always warm up. If you are a runner, before you go out for your actual run, take two to five minutes to jog in place to prepare. You will find that you have a better run.

18. Listen to your body. If you find that you are dragging, eat the right foods that will give your body the energy needed and are healthy. Examples of these foods include carrots, rice cakes, breakfast cereals, bananas, and potatoes.

19. Instead of taking an injury through rehabilitation after it is an injury, why not rehab before. You can actually take preventative measures before you indulge in a sport or activity by ensuring you stretch properly. This will help strengthen as well as stretch muscles, which in turn, helps reduce unnecessary injuries.

20. Getting to the gym is a great way to get fit. However, there are other benefits to going to the gym. You will have the opportunity to expand your social ring by making new friends, all working to get fit just like you. This will provide needed encouragement, which in turn helps you to stay motivated.

21. Having firm arms is something that many people focus on when exercising. For an Overhead Tricep Press, standing on the floor with your feet about two feet apart, knees slightly bent, you will extend your arms over your head. Keep your elbows locked and then very slowly lower your hands behind your head. You want to do this with some type of weight, but small weights like one to five pounds. If you do not have weights of your own, you can hold a one-pound of vegetables, which will work perfectly.

22. Tennis is not only a fun sport, but also a great way to exercise. You do not have to be a Venice Williams to play; in fact, you do not even have to be

good. Just running after the ball alone will help get you into shape. This is a great way to strengthen your cardiovascular system and lose weight. You can find tennis courts in just about every city and if you would like to play but have no idea how, lessons are reasonable.

23. When you ask many adults when the last time they rode a bike is, they cannot answer. Although bicycling is a favorite pastime, many adults do not take advantage of this great option for exercise. Not only does bike riding exercise the body and build a stronger cardiovascular system, it allows you to get out and enjoy nature, fresh air, and see new sites.

24. While you may not end up with a washboard stomach, you can do some things to get your abdomen in better shape. Crunches have long been a favorite for many athletes for the very reason that they work. Lying on your back with knees bent, keeping feet flat on the floor, cross your hands across your chest and then curl your torso, rolling from your sternum toward your hips. Do this slowly and start out with a set of ten crunches in three reps. In other words, do ten crunches, wait a minute, do ten more, wait a minute, and then do the final ten. As you get accustomed to these, you can increase both the number of sets and reps.

"Finally Learn The **'Never Before Told Secrets'** Million Dollar Weight Loss Industries Don't Want You To Know!

... And Follow This Step by Step Program To **Lose Up To 30 Pounds A Month!'**

[Click here](#) for more info...

25. Before you get too excited, understand that when you eat, it is not how much you eat, but what you eat. If you find that getting fit and eating less food is too hard, add more of the right food into your diet. Great options include an orange, hard-boiled egg, small broiled chicken breast, and fresh vegetables such as carrots, celery sticks. If you have a craving for something sweet, many delicious options are available such as Weight Watchers cheesecake or Chocolate Éclairs. Getting fit does not mean total deprivation.

26. If you live in a geographical area, where you have the luxury of sandy beaches, and if you are in the process of rehabilitating your knees, ankles, and even some injuries to the back, you should avoid running in the sand during this time. The reason is that running on sand actually produces greater force on the joints.

27. If you have asthma and love to exercise, it is important to keep your inhaler with you. However, if for some reason you forget, remember that caffeine can provide temporary relieve of bronchial constriction. If you do not have asthma but after years of running, you develop breathing problems, you could be suffering from “Exercise Induced Asthma”, which should be mentioned to your physician.

28. Try to envision how great you will look and feel once you get in shape. If you can, find a picture of someone that has the same body type and pin it up where you can look at it every day to help you see the same results you too can reach with hard work and time.

29. Certain foods provide specific benefits for people who workout. If you need quick energy or planning to run a 4K or 10K and need to accelerate your metabolism, bread, grain-based food, sugar, and honey are great choices. If your goal is to burn fat, you should eat peas, oat bran, pasta, rice, beans, lentils, and soya beans.

30. While you are only as old as you feel, keep in mind that young people can very easily leap over an obstacle in the garage or take a nice jog through

the neighborhood with no problem. However, as people age, it is crucial to stay fit and healthy and pay attention to your age. Something that might have been easy for you when you were young may now cause injury or illness. If you find you can no longer perform one activity, do not be discouraged; just substitute one activity for another.

31. Accept the fact that everyone's body is built different and when God created you, He did not make a mistake. When you see the models and Hollywood stars on the cover of those glamour magazines, keep in mind that every one of those photographs have been airbrushed, meaning they really do not look like that. While they make look fantastic either way, you are not those people - you are you! Always love yourself for who you are inside. As long as you are eating right, exercising, and doing the best for yourself, then you should be happy. You may never reach that model appearance and to be honest, you do not want to. Do the best you can and love the inside beauty more than the outside beauty!

32. Just as warming up for exercise is important, cooling down after exercise is just as important. Once you have completed your workout, take five to 10 minutes to walk, or stretch to allow your body to cool down. This is very important for the muscles and joints and for the heart and lung.

33. Both jogging and walking are GREAT ways to get fit. Not only do they tone the muscles, relieve stress, create a healthier heart, and improve lung capability, they make you look wonderful, which in turns helps you get excited about doing other exercise for fitness.

34. Swimming is an excellent way to get into and stay in shape. If you do not own a pool, many high schools have aquatic centers, or there is always the YWCA or YMCA, or your local gym. Many offer water aerobic classes that will help you tighten your body, lose weight, and get a good overall workout.

35. Squats are excellent for glutes, hamstrings, quads, and calves. With your feet standing firm and spread apart about two feet, bend your knees slightly. Then, very smoothly, you will squat toward the floor without going

all the way down. This usually takes some practice but within a short period, you will enjoy the benefits.

Get Healthy and Stay Healthy!

1. It is crucial that you have regular checkups, which could include mammograms, pap smears, checks for colon cancer, EKGs, etc. Many times, a regular checkup could have caught something earlier on, actually saving a life. If you do not feel good, have your doctor check things out. If you are due for your annual mammogram, have it done. You could possibly be saving your own life.
2. If you know that you are not feeling “right” but the doctor tells you everything is fine, listen to your body. There is nothing wrong with getting a second opinion. If you are not comfortable with the doctor’s advice, get another exam. In addition, if you go to a doctor who tells you that what you feel is in your head, or you are crazy, get out of there immediately. You know your body better than anyone does and you need a doctor that believes in you and offers the right kind of support and encouragement.
3. Get into a habit of reading the labels on food. While they may have messages such as “Low Fat” or “Reduced Calorie” written all over the front of the package or can, when you read the label and understand what you are looking for, you will probably be surprised. Regardless of what the claim may be, the label may tell another story. The FDA provides these important guidelines, therefore, should be what you look for. If the message and label do not jive, move on to a different product.

Fat-Free	Less than 0.5 grams of fat per serving, with no added fat or oil
Low fat	3 grams or less of fat per serving
Less fat	25% or less fat than the comparison food
Saturated Fat Free	Less than 0.5 grams of saturated fat and 0.5 grams of trans-fatty acids per serving
Cholesterol-Free	Less than 2 mg cholesterol per serving, and 2 grams or less saturated fat per serving
Low Cholesterol	20 mg or less cholesterol per serving and 2 grams or less saturated fat per serving

The Safe Way To Getting Healthy And Staying Healthy

Reduced Calorie	At least 25% fewer calories per serving than the comparison food
Low Calorie	40 calories or less per serving
Extra Lean	Less than 5 grams of fat, 2 grams of saturated fat, and 95 mg of cholesterol per (100 gram) serving of meat, poultry or seafood
Lean	Less than 10 grams of fat, 4.5 g of saturated fat, and 95 mg of cholesterol per (100 gram) serving of meat, poultry or seafood
Light (fat)	50% or less of the fat than in the comparison food (ex: 50% less fat than our regular cheese)
Light (calories)	1/3 fewer calories than the comparison food
High-Fiber	5 grams or more fiber per serving
Sugar-Free	Less than 0.5 grams of sugar per serving
Sodium-Free or Salt-Free	Less than 5 mg of sodium per serving
Low Sodium	140 mg or less per serving
Very Low Sodium	35 mg or less per serving

New! Hollywood beauty professionals and celebrities reveal exactly how they get the perfect hair, skin, nails, make up, and bodies...

[Click here](#) now!

4. When you think about losing weight, more importantly than weight is the amount of fat you are carrying around. This fat is measured with what is called Body Mass Index, or BMI. For women, if you are fit, your percent of body fat should range from 21% to 31%. If you are in incredible shape, that could be as low as 10%. For men, fit should be between 14% and 25%, and excellent shape, as low as 2%.

To calculate your body fat, write down how much you weigh (be honest – no one will see this but you). Multiply your weight by 703. Next, write down your height, in inches. Multiply by that same number. Then you will divide your weight number by your height number. That is your BMI. For example, if your weight were 150 pounds x 703, your weight answer would be 105,450. If your height is 5'4", that would be 64 inches x 64 for a total of 4,096. Taking the 105,450 divided by 4,096, you come out with a BMI of 25.7.

5. A great way to maintain a healthy cardiovascular system is by adding flaxseed to your daily diet. Flaxseed actually contains what is called alpha-linolenic acid, which is a fatty acid essential in controlling blood pressure. They have a benefit of helping with digestion; just make sure the flaxseed is crushed for easier consumption and absorption.

6. Most people know that sunscreen is important for shoulders, backs, legs, and arms when out in the sun but there are other parts of the body that are often overlooked. When enjoying the beautiful sun, be sure to use sunscreen on your ears, slips, and even the tops of your feet as well!

7. Make sure you conduct regular breast examines. This can quickly and painlessly be done during your shower or lying down when going to bed. Contact your primary physician or gynecologist for a free pamphlet showing the proper way this is done. Taking proactive steps could save your life.

8. Caffeine can dehydrate your body so try to remove it from your daily intake. This may require some weaning, but when done, you will feel better. If you feel that you need something, instead of grabbing a cup of caffeinated coffee or soda, try drinking herbal tea.

9. Whole wheat is actually better for you. It offers more fiber, which helps reduce the risk of heart disease, stroke, cancer, diverticulosis, diabetes to name a few. When possible, set aside the white flour and bread and reach for products that are made from oats, barley, buckwheat, bulgur, rye, brown rice, millet, and wheat.

10. If you are not sure what your family history is in relation to health, now is a good time to find out. This can be especially true if you are adopted or disconnected from immediately family members. There might be certain types of cancer, diabetes, asthma, or other illnesses that you could get a jump on if you knew they were prevalent in your family. Once you discover any risks, talk with your physician for recommendations.

11. If you are like any other person on the face of the planet, you have cravings for sweet foods. To help with these cravings, you can use Normoglycaemia to help normalize your blood glucose levels. This supplement is very rich in magnesium, B Vitamins, and Chromium and has been proven successful for many years.

12. When you finish with your bath or shower, you can actually help your body's circulation and improvement in which lymph glands drain, all by the way that you towel off your body. Very simply, when drying your arms and legs as well as torso, always towel away toward the groin for your legs and toward your armpits for the arms and torso. This might sound funny, but studies have shown this works.

13. If you suffer from asthma, you already know that some sports should be avoided, depending on the severity. If you have trouble on a daily basis and love sports, be encouraged to know that some sports are asthma-friendly and in fact, can be helpful in that they help make the lungs stronger. These sports include swimming, cycling, and fishing, walking, and canoeing. Again, check with your physician before getting involved with any sport if you have a health condition.

14. Hot, spicy foods that contain curry, chilies, or other hot peppers such as cayenne, help to trigger endorphins. These hormones are what make people feel good and well balanced. In fact, endorphins are like a natural morphine that helps ease pain and provide a sense of well being. The next time you are feeling a little down or have some minor pain, try eating something spicy.

15. Ah, the sweet taste of fresh berries! Berries are actually good for you and contain plant nutrients called anthocyanidins. These are incredible antioxidants and some have high levels of resveratrol, which helps fight heart disease and cancer. The next time you want something sweet, juicy, and good for you, reach for blueberries, grapes, or strawberries, and do not feel guilty!

16. Both of these products can help in certain situations. For example, aspirin is an analgesic, used for pain while ibuprofen is both an analgesic and anti-inflammatory. Therefore, the next time you have to deal with sore muscles after a good workout, remember that you can get some needed relief from these over the counter remedies.

17. If you love nuts, then you are in luck. Almonds are not only delicious and make a great snack food, medical studies show they contain as much protein per ounce as red meat. In addition, they aid in reducing the risk of heart attacks by up to 50%. The next time you need something crunchy, reach for a handful of almonds.

18. With today's breakthroughs, there are many innovative ways to fight cancer. Although you may find this difficult to believe, the American Institute for Cancer Research has come up with a surprising way to fight cancer. After conducting thorough studies, researchers found that drinking tea, which contains antioxidants to help neutralize "free radicals" helps to fight cancer. While it is not a cure-all, if cancer runs in your family, it certainly will not hurt to add tea to your daily consumption.

19. Water is excellent for the body and good health. Water helps flush out toxins and other unwanted things lingering in the body. Water also replenishes fluids that help lubricate the internal body, keeps you hydrated, reduces hunger, which helps with weight loss, and helps to make skin look smooth and young. If you are not used to drinking water, it may seem hard at first, but very quickly, you will enjoy the clean, refreshed way it makes you feel. At a minimum, you should drink 64-ounces a day and more if you can.

20. Many people do not realize how dangerous mixing medications can be. In fact, some combinations are lethal. If you are on medication, make sure your physician knows everything you take, including herbs and supplements. To take it one-step further, when you have a new prescription filled, ask the pharmacist if there are any bad interactions with your other current medication.

21. The practice of Yoga is actually a spiritual practice. However, with the many benefits received it has quickly become a popular choice to thousands of people strictly for health. Yoga helps stretch out muscles and ligaments, tone the body, and the greatest benefit is that it helps to clear the mind. Having a clear mind works toward a healthy body.

22. The medical field has proven that laughter actually works with your body toward good health. Have you ever heard the expression, “Laughter is the best medicine”? The truth is, when you laugh, several positive things happen. Your muscles relax; stress hormone product is reduced; you forget about pain; your body’s immune system is improved; high-blood pressure is lowered; the heart and lungs are strengthened; and overall, you feel better!

23. People often confuse “dieting” with nutrition. Your body needs to have nutrients replaced, whether through foods being eaten or supplements. Do you remember what you learned in elementary school about the four major food groups? As adult, eating balanced meals from these groups still applies. It is important to remove the “junk food” from your diet and stick with healthy foods. If you do not like certain things such as fruits or vegetables, be sure you are taking a supplement to get the nutrients needed.

Another consideration is if you are a vegetarian. There are certain benefits taken from meat such as iron and B-12 that you should consider taking a supplement for in exchange for the meat.

24. Eating bland foods is boring, unsatisfying, and if that is what your diet consists of, more than likely, you will be off it shortly after you start. If you enjoy good tasting food, some sauces and spices can enhance your food while not adding calories to your food. The next you grill meat, consider using one of these:

Reduced-salt Soy Sauce

Mustard

Salsa

Worcestershire Sauce

Vinegar (this comes in wonderful flavors)

Teriyaki Sauce

Tomato Sauce

Hot Sauce

*Concerned About Menopause?

25. While some supplements and vitamins on the market are not worth buying and some, such as Ephedrine, have been proven dangerous, other sources are healthy. Most important, you need to understand what it is you are taking, and strictly follow dosage just as you would medication that has been prescribed. If you are unsure, check with your physician, a nutritionist, or a reputable health food store. Many supplements that are good for overall health include grape seed extract, Glucosamine, aloe vera, and Selenium. Vitamins to consider would include Vitamin E, Vitamin C, B-12, Iron, Magnesium, and Calcium.

26. Everyone knows, whether they want to admit it or not, reducing calories will help you to lose weight. However, just as you should reduce the calorie intake, you need to know when to eat. Breakfast is the most important meal of the day and the one meal that should not be missed. Lunch should be healthy but a less than what you ate for breakfast. As you approach dinner, eat healthy but light. Avoid after dinner snacks or eating before bed!

27. High cholesterol leads to hardening of arteries, which in turn, leads to heart disease or attack. Keep your intake of food healthy, limit the amount of sugar you eat, and have your cholesterol checked. If it is higher than 200, ask your doctor for ways to reduce it.

28. Most jobs in today's society require the use of a computer. If you sit in front of a computer all day or work any job or hobby that requires your eyes to work hard, be sure to take breaks throughout your day. For soothing relief, you can use eye drops, close your eyes for a few minutes to allow them to rest, and look away to something other than what you are working on. Also, ensure that you are working with appropriate lighting, which is an oversight many people make. These are ways in which to give your eyes a much-needed break. Eyestrain can cause eye problems as well as headaches.

29. These are oestrogen-like compounds found in plants that act as hormone blockers any place in the body where there are excess hormones that could cause such cancers such as breast cancer. Flavonoids are also strong antioxidants, which can be found in foods such as beans, onions, broccoli, apples, and soy products.

30. As a way of reducing blood pressure, which is bad on the heart, reduce the amount of sodium (salt) you intake. You may be thinking of table salt but you should know that many canned vegetables, soups, even soda, are very high in sodium. Look at your labels and try to cut back on processed foods. If you have a craving for salt, switch to natural seasoning and just a little salt.

31. Often people think by drinking fruit juices or eating low-fat fruit roll-ups and such, they are cutting out or eliminating sugar. The fact is that some fruit juices have more sugar than a soda. Reduction of sugar is important to good health; therefore always check out the sugar content of anything you put in your mouth, even if it appears to be healthy.

32. Find some time away from noise and distractions for you. Meditation can come in many forms. Whatever way you meditate, ensure that you are in a quiet place with soft lighting, sit with good posture and in a comfortable position, practice slow, rhythmic breathing, and concentrate on something calm and relaxing. Meditation is a great stress reducer, which is vital for good health.

33. Does sleep really affect health? You bet it does. During sleep, your body is resting and recovering from all the work it has done throughout the day. Your serotonin levels are brought back in line, your muscles relax, and mind is allowed to clear itself in preparation for the next day. If you are not getting the proper amount of sleep, you will notice it in a physical way. While there is no magic number, usually between six and eight hours a night is appropriate. If you have difficulty getting to sleep, before you climb into bed, try Yoga, listening to soft, relaxing music, a glass of wine, or if you can talk someone into it, a good massage.

34. You have probably heard this before. Stress is a key contributor to poor health. Study after study has found that when a person is stressed, the body reacts. The result of stress could be high-blood pressure, tension headaches,

upset stomachs, poor posture, and so on. Keeping stress in check will help you manage your overall health much better.

35. If you have bathroom scales, you should either get rid of them or put them away for a while. Weight does not accurately reflect the level of your fitness. If you should be measuring anything, it should be body fat, not the weight.

Being healthy ensures that you live a long life. Take a look around your right now. If you don't get healthy and stay that way you'll miss every single one of those things.

I hope this guide helps you, and I wish you much success on your journey to getting healthy and staying that way!
