

How to Set Up an Iframe App for Facebook to work with Wordpress In Blog Plugin

Step 1

Go to <http://facebook.com/developers>. If you have not already granted developers access to your facebook profile you will be asked to do so.

At the top right of the page Choose Set up New App

As per Image Below

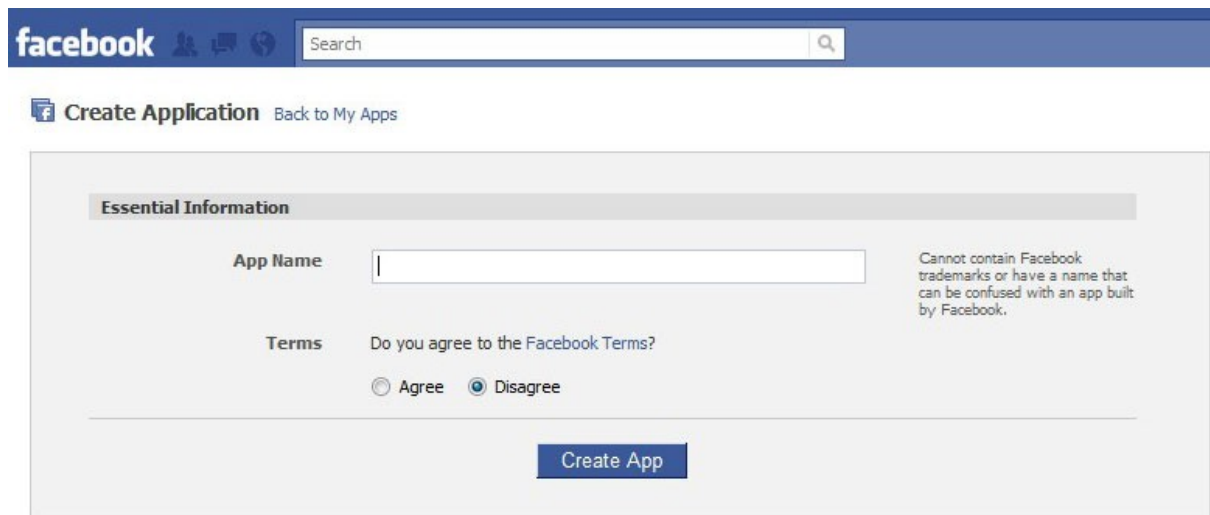

The screenshot shows the Facebook Developers page. At the top right, there is a button labeled '+ Set Up New App'. Below the navigation bar, the 'News' section features a post titled 'Platform Updates: Operation Developer Love' by Yasser Shohoud, published on Friday. The post has 1155 shares. Below the news section, there is a section titled 'HTTPS URLs for Page tabs' which explains that Facebook now supports HTTPS for Canvas apps. It includes two input fields: 'Tab URL' and 'Secure Tab URL'. The 'Tab URL' field is described as 'Facebook pulls content for your tab from this URL', and the 'Secure Tab URL' field is described as 'The secure version of the Tab URL'. Below this, there is a section titled 'Requests 2.0 notifications take users directly to your app' which states that users will now be taken directly to the canvas page when they click on a notification about a request. At the bottom, there is a diagram showing a notification in the 'Notifications' sidebar that says 'Douglas Purdy sent you a request in My Great Canvas Application. 15 minutes ago'. A blue arrow points from this notification to a preview of the 'My Great Canvas App' interface.

Step 2

Choose a name for your app and agree

Read Facebook Terms

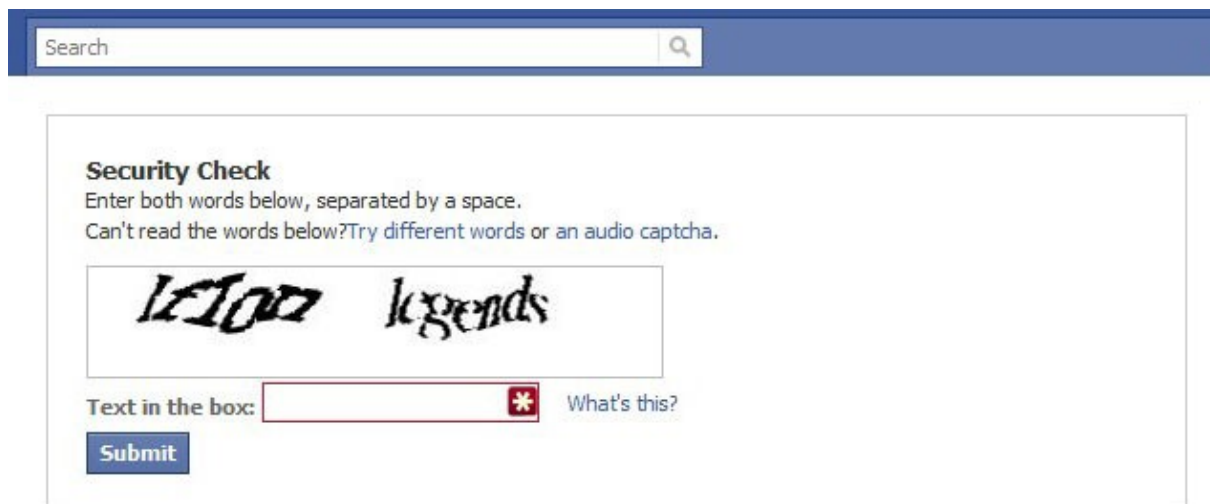

Agree

The image shows the Facebook app creation interface. At the top is the Facebook header with the logo and a search bar. Below the header, there are links for "Create Application" and "Back to My Apps". The main content area is titled "Essential Information" and contains two sections. The first section is for the "App Name", with a text input field and a note stating: "Cannot contain Facebook trademarks or have a name that can be confused with an app built by Facebook." The second section is for "Terms", with the question "Do you agree to the Facebook Terms?" and two radio buttons: "Agree" (which is selected) and "Disagree". At the bottom of the form is a blue "Create App" button.

Step 3

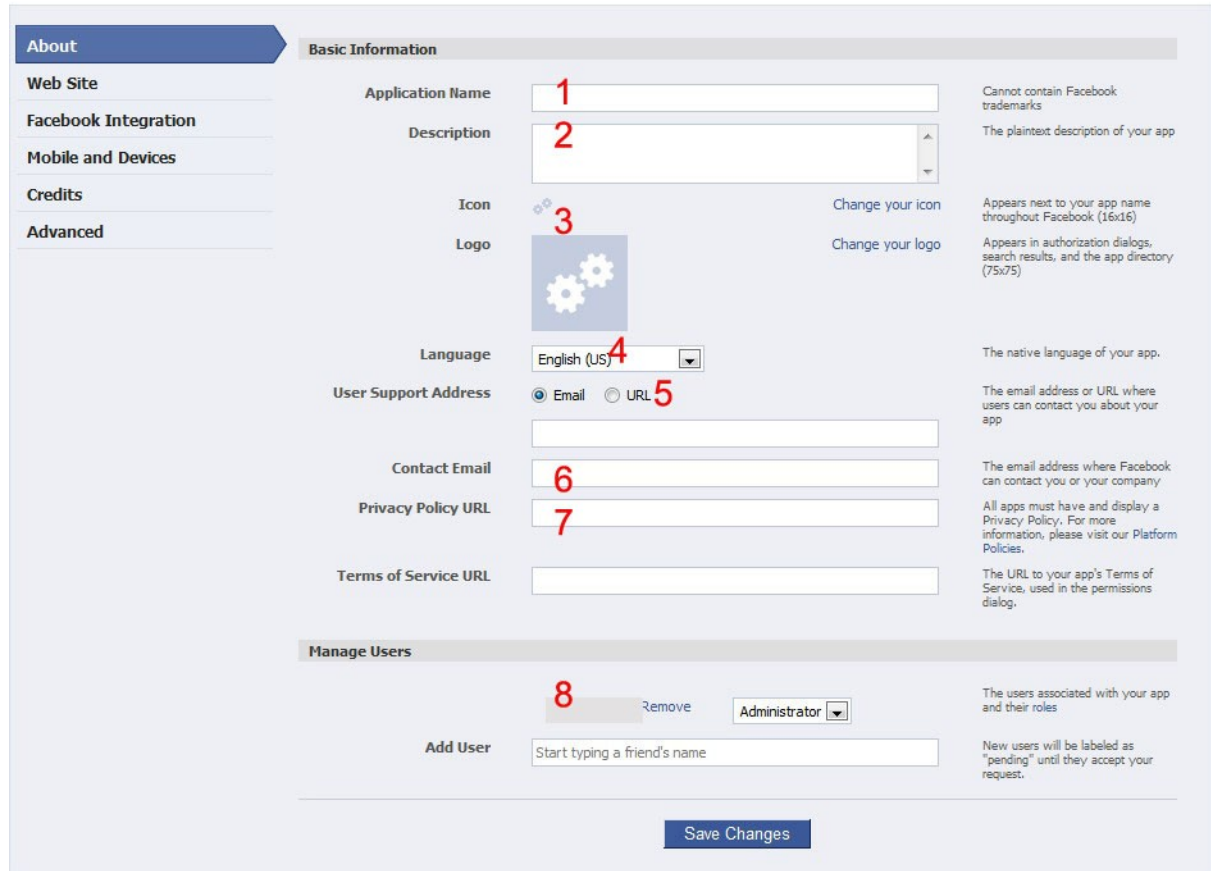

Enter Captcha and Submit

The image shows the Facebook security check interface. At the top is the Facebook header with the logo and a search bar. Below the header, there is a "Security Check" section. It contains the text: "Enter both words below, separated by a space. Can't read the words below? Try different words or an audio captcha." Below this text is a box containing two words: "lemon" and "legends". Below the box is a text input field with a red asterisk icon and the text "What's this?". To the left of the input field is the text "Text in the box:". Below the input field is a blue "Submit" button.

STEP 4

 Edit Thai Silk Magic [Back to My Apps](#)

The screenshot shows the 'Basic Information' section of a Facebook app's settings. On the left is a sidebar with navigation links: 'About' (highlighted), 'Web Site', 'Facebook Integration', 'Mobile and Devices', 'Credits', and 'Advanced'. The main content area contains various input fields and options, each with a red number indicating a step:

- 1**: Application Name (text input)
- 2**: Description (text input)
- 3**: Icon (image input)
- 4**: Language (dropdown menu)
- 5**: User Support Address (radio buttons for 'Email' and 'URL')
- 6**: Contact Email (text input)
- 7**: Privacy Policy URL (text input)
- 8**: Add User (text input)

Helpful text and links are provided for several fields: 'Cannot contain Facebook trademarks' for Application Name; 'The plaintext description of your app' for Description; 'Appears next to your app name throughout Facebook (16x16)' for Icon; 'Appears in authorization dialogs, search results, and the app directory (75x75)' for Logo; 'The native language of your app.' for Language; 'The email address or URL where users can contact you about your app' for User Support Address; 'The email address where Facebook can contact you or your company' for Contact Email; 'All apps must have and display a Privacy Policy. For more information, please visit our Platform Policies.' for Privacy Policy URL; 'The URL to your app's Terms of Service, used in the permissions dialog.' for Terms of Service URL; 'The users associated with your app and their roles' for Manage Users; and 'New users will be labeled as "pending" until they accept your request.' for Add User. A 'Save Changes' button is at the bottom.

1. Application Name is filled out so just check you are happy with it.
2. Write a description
3. Choose a favicon to go on the fanpage (optional)
4. Choose your language
5. Choose whether you want support to go to a URL or an Email
6. Modify your Address/email for support and contact email accordingly
7. Enter your Privacy Policy URL
8. Add additional users to the app if you want to

Step 5

The screenshot shows the Facebook Integration settings page. The left sidebar contains links: About, Web Site, Facebook Integration (highlighted), Mobile and Devices, Credits, and Advanced. The main content area has four sections:

- Core Settings** (labeled 1): Fields for Application ID and Application Secret. To the right are OAuth client_id and OAuth client_secret.
- Canvas** (labeled 2, 3, 4, 5): Fields for Canvas Page (labeled 2), Canvas URL (labeled 3), Secure Canvas URL, Canvas Type (radio buttons for IFrame and FBML, with IFrame selected and labeled 4), IFrame Size (radio buttons for Show scrollbars and Auto-resize, with Auto-resize selected and labeled 5), and Bookmark URL.
- Discovery**: A Social Discovery toggle set to Enabled.
- Page Tabs** (labeled 6, 7, 8, 9, 10): Fields for Tab Name (labeled 6), Page Tab Type (radio buttons for IFrame and FBML, with IFrame selected and labeled 7), Tab URL (labeled 8), Secure Tab URL (labeled 9), and Edit URL (labeled 10).

A 'Save Changes' button is located at the bottom right of the form.

1. Take a note of your application ID for the Wordpress post
2. Use the Url of your website (e.g. <http://yourdomain.com/fanpage/> (
3. If you have a Secure URL (One with https use that here)
4. Choose Iframe as Canvas Type
5. Choose Auto resize assuming you dont want scroll bars
6. Choose What you Want the Page tab to be called
7. Check this is Iframes...
8. For the Tab URL Enter where you want the page to come from. (This so for example: www.yourdomain.com/fanpage/tabname

9. Where relevant enter the url you want the secure tab to come from
10. Click Save Your app is complete.

Step 6

 My Apps + Set Up New App

Changes saved. Note that your changes may take several minutes to propagate to all servers.

Directory Status: Not Submitted
Once you have completed your app, you may [submit it](#) to the App Directory.

Delete App

On the right hand side Choose Application Profile Page

Step 7

On the left hand side of this image you will see Add to my Page and this is what you need to use to add the app to Facebook.

The screenshot shows the Facebook 'Get Started' interface for a new app. On the left is a sidebar with navigation options. The main area contains a 'Welcome' message and a numbered list of five steps to get started. Step 1 is 'Add an image', Step 2 is 'Invite your friends', Step 3 is 'Tell your fans', Step 4 is 'Post status updates', and Step 5 is 'Promote this Page on your website'. Each step includes a brief description and a button to perform the action.

Step 8

Choose which of your pages you would like to add your new tab to and you will now have a menu item on your facebook page which will give you the same content as you chose to pull it in from in as per Step 5 No. 8
(www.domain.com/fanpage/tabname)

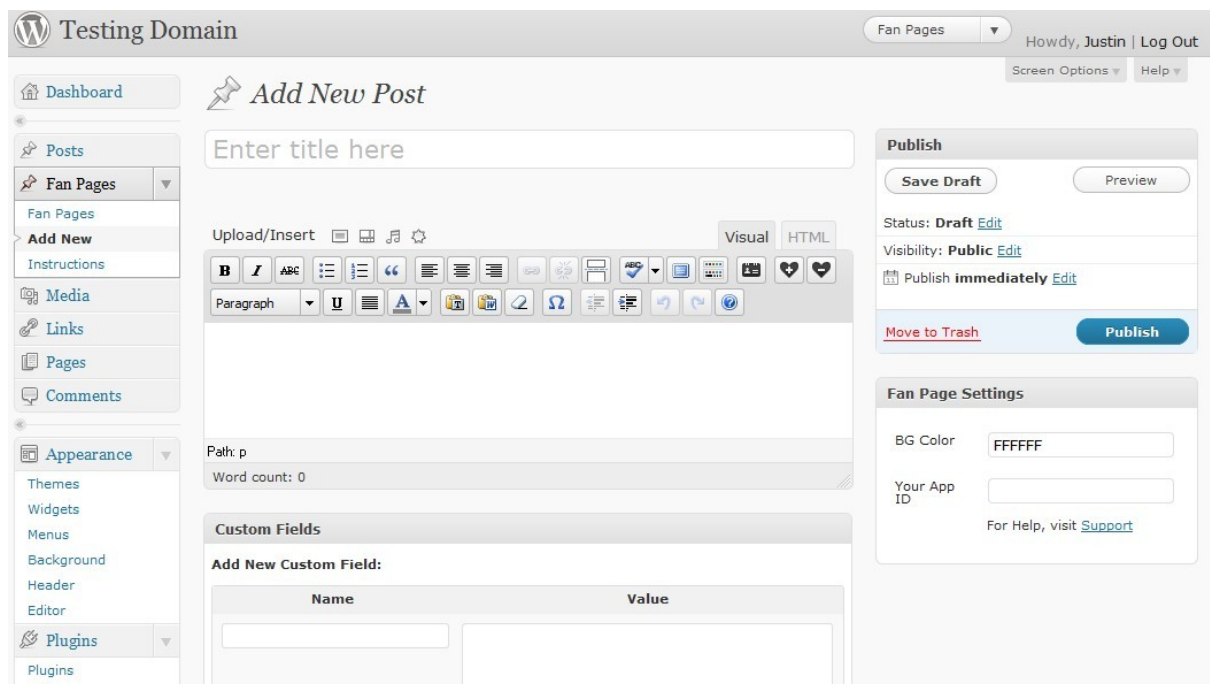

Step 9 – Integrating with Wordpress

You now need to go to your wordpress blog and set up a fanpage.

With our plugin once you have installed and activated it you have a new fanpage section on the site.

It should look something like this:

On the right hand side you will see the fanpage settings where you can choose the different background colours for the tabs.

This is also where you should put in your App id.

In this plugin three additional tabs have been added. One to add in your custom autoresponder code. And then two hearts which you can use to show which parts of the page should be seen when you like a page or stop liking a page.

You would then create and publish the post.

The permalink should look something like what you used within facebook for the taburl. Ie: <http://www.yourdomain.com/fanpage/tabname>.

As you get more proficient with this process the time taken to set up fanpages can be really quite fast!
