

# Blackhat Stumble Upon

I'm sure by now you've heard of the social site [stumbleupon.com](http://stumbleupon.com). This site can be an extremely powerful traffic source! Especially if you know some blackhat tricks! Let me clarify that blackhat techniques are not illegal. This is simply a way to exploit the system that is already in place.

I'm going to show you a simple way to get traffic to your site using [stumbleupon.com](http://stumbleupon.com) and then I'll show you how to automate it and start driving some serious traffic!

The manual way to get traffic is to mutually stumble a person's site. In other words, you stumble a person's site and then they stumble your site. To find people who want to trade stumbles, simply go here:

<http://forums.digitalpoint.com/forumdisplay.php?f=105>

If you haven't joined [stumbleupon.com](http://stumbleupon.com), go now and sign up for a free account and then activate your toolbar. The system is very simple and will only take you about 15 to figure everything out if you've never been to the site before.

**Blackhat Stumble-** Before we get started on this technique, let me say that it doesn't matter which method you use if your site has poor quality information on it. If you are trying to promote affiliate programs, I would suggest you write a high quality report and publish it nice and neat on an .html page.

The whole purpose of stumble upon is to get a "thumbs up" for your site, so more people want to look at it. Getting a "thumbs down" is going to defeat the purpose of

implementing these techniques all together. So make sure your content is up to par before starting this method.

In a nutshell, what you are going to do with this technique is bribe other people to stumble your site and give you a thumbs up. You will need a bonus to give them after they've stumbled your site. This can be some software, a free report, free videos, ebooks, etc....

What's going to make this technique explode is using a blackhat script that automated the entire process! Here's how it works.....

- 1.** You download and install the script on your server (it takes less than 10 minutes to install the script on most servers)
- 2.** You create a bonus that people can give away as a bribe
- 3.** You ask people to stumble upon 3-4-5 pages on your website (You can ask people to stumble on a maximum of 10 pages on your website. But asking for 3-5 stumbles is suggested.)
- 4.** After stumbling, they submit their stumbleupon.com username through a form that the script generates.
- 5.** The script then crawls their stumbleupon.com page to verify that they have indeed stumbled upon pages on your website
- 6.** On successful verification, the person is forwarded to your bonus bribe page

That's it! Very simple huh? You will need php and mysql database to install the script. If you don't know how to install the script, you can get someone to do it for a measly \$15 bucks. Go here for the script: <http://www.suhack.com>
